ADDENDUM #3
Job No. P91-315-86
From I-55 to I-80
Will, Cook, and DuPage Counties

Attached is a copy of the Preliminary Environmental Site Assessment conducted by the Illinois State Geological Survey (ISGS) for the subject project as described in your Hazardous Waste Survey Request.

Volatile organic testing was done for these parcels (B & C) and the attached (ISGS) report indicates no detection of contamination. However, these parcels are surrounded by former landfill sites, industries that may use or store hazardous materials on site, and a LUST site. The report has assessed a moderate risk for this project and recommends that continued environmental monitoring of parcels B and C may be desired if additional right-of-way is required at these locations.

It is the opinion of this office, in consultation with the Chief Counsel's Office, that if right-of-way acquisition does not include any underground storage tanks and if the acquisition of either parcel does not require any excavations or subsurface utility relocations, then no additional preliminary testing for the project is necessary. If the above stipulations can be met, then the project will be in compliance with Departmental Hazardous Waste Policy LEN-13. If the stipulations cannot be met, then the statewide consultant should be requested to perform additional investigations. Please notify this office of any actions you may decide to take concerning these sites (i.e., avoidance, further investigation, etc.). The attached transmittal form is provided for your convenience.

Other findings and recommendations of the report should be carefully considered.

D. Carlson

Cook, DuPage, and Will Counties

Attached is a copy of the Preliminary Environmental Site Assessment conducted by the Illinois State Geological Survey (ISGS) for the subject project as described in your original Hazardous Waste Survey Request.

Volatile organic testing was done for this project and the attached (ISGS) report indicates no detection of leaking underground storage tanks (LUST's). However, an open dump containing approximately twenty 55-gallon drums and other miscellaneous waste materials was discovered in a low area west of Ham, Tug, and Fleeting barge company. If this property is to be acquired, the report recommends further analysis be performed to determine the precise nature and extent of any contamination that may exist at this location.

It is the opinion of this office that the attached (ISGS) report's conclusion of moderate risk at the site west of Ham, Tug, and Fleeting requires that if the acquisition of additional right-of-way cannot be avoided at this location, then further investigation of the project be undertaken by the statewide consultant in order to meet the requirements of Departmental Hazardous Waste Policy LEN-13.

Other findings and recommendations of the report should be carefully considered. A copy of the ISGS report has been sent to the IEPA's Land Pollution Division as a complaint of an open dump.

If you have any questions regarding this report or the tasking of the statewide consultant, please respectively contact either John Washburn at (217) 782-7074 or Max Landes at (217) 785-2940.
